FUN FACTS ABOUT GOLD: READING AND MULTIPLE CHOICE

Directions: Read the passage and answer the questions.

Gold is a special metal that people have loved for a very long time. It shines with a yellow-golden color. A bar of gold is also very heavy. Even though it's a metal, it's actually not magnetic. It will not stick to a refrigerator or other surface.

Gold is also very valuable to many people, or worth a lot, because it's not easy to find or get. It's been used to make beautiful jewelry like crowns, necklaces, rings, and bracelets. Kings and queens used to decorate their castles because it's so special. Gold is also used to make our favorite devices like smartphones and computers. It's almost like having treasure inside of your electronic device.

<p>1. What color is gold? a) blue b) orange c) yellow d) silver</p>	<p>2. Can gold stick to a refrigerator? a) Yes b) No</p>	<p>3. Why is gold valuable and worth a lot? a) It is easy to find. b) It is hard to find. c) It is not valuable. d) It is used by kings and queens.</p>
