FUN FACTS ABOUT PENGUINS: READING AND MULTIPLE CHOICE

Directions: Read the passage and answer the questions.

Penguins are amazing birds that live in cold places like Antarctica. They can survive on land but can't fly. They are great swimmers because they have special flippers. They glide and swim easily.

Penguins come in different sizes – some are small while others are as tall as three feet.

To stay warm in the cold, they have a thick layer of fat and huddle together with their friends. When it's time to be parents, penguin dads take care of the eggs while moms find food. Penguins also talk to each other using sounds and movements.

1. Penguins can fly.

- a) true
- b) false

2. Penguins are able to swim because they have

- a) a thick layer of fat
- b) long tails
- c) flippers
